Profile

Hands-on Full-Stack Engineer with 4+ years of experience developing and optimizing enterprise-level applications for industry-leading companies in online gaming and betting.

I enjoy building applications, solving problems, and finding practical solutions to technical challenges. Working across different technologies has given me a well-rounded, adaptable skill set and the flexibility to adapt to different projects.

Experience

Software Engineer, Betfair Feb 2026 - Present
BETFAIR ROMANIA DEVELOPMENT *Cluj, Romania*

- Build integration APIs and adapters in Java/Spring and Cougar (REST and SOAP) to onboard new game and rewards integrations with some of the biggest players in the gaming industry
- Maintain the internal admin tool powering jackpot configuration, including trigger thresholds, safeguarding accuracy and reliability for a business-critical live feature
- Migrated the rewards service to AWS, containerizing it with Docker and setting up monitoring via SignalFx

Software Engineer, PokerStars Aug 2023 - Feb 2026
BETFAIR ROMANIA DEVELOPMENT *Cluj, Romania*

- Built and maintained a secure authentication platform in Spring, OAuth2, and PostgreSQL, coordinating logins across multiple partners to support utilizing the engine as a SaaS product
- Streamed login/logout events through Kafka, using Protocol Buffers (Protobuf) for serialization, and improved performance with Redis caching
- Monitored platform health via Grafana while partnering with cross-functional teams to ship resilient features, such as OAuth integration in the identity provider (IdP) to support external authentications

Software Engineer, SISAL Feb 2025 - Sep 2025
BETFAIR ROMANIA DEVELOPMENT *Remote*

- Built backend microservices in Spring (REST and SOAP) that follow regulatory reporting requirements from authorities across Italy, Spain, and France
- Developed report storage and in-app scheduled jobs for compliance reporting in XML, using Kafka for event streaming and MongoDB for caching and versioning, hitting all regulatory deadlines
- Implemented validation and monitoring processes to safeguard regulatory data accuracy

Software Engineer Intern, PokerStars Jan 2023 - Aug 2023
BETFAIR ROMANIA DEVELOPMENT *Cluj, Romania*

- Built an internal admin tool for managing PokerStars help center articles, configs, and caching across multiple jurisdictions
- Integrated a Salesforce-powered chatbot into the PokerStars help center page, working with international teams to deliver the enterprise-scale feature
- Owned stability of the main PokerStars frontend platform, prioritizing fast resolution of critical bugs and iterating on core functionality, such as caching configured help articles

Software Developer Freelancer Jul 2022 - Jan 2023
INDEPENDENT CONTRACT *Remote*

- Built a custom Android app end-to-end, using Kotlin/Java and SQLite, with a clean offline-first architecture, for managing Airbnb bookings, occupancy dashboards, and property data
- Delivered the app solo in 3 months, then provided ongoing support and maintenance

Education

Technical University of Cluj-Napoca Oct 2021 - Jul 2025
Bachelor's of Computer Science and Engineering *Cluj, Romania*

National High School "Andrei Muresanu" Sep 2017 - May 2021
High School Diploma of Programming Class *Bistriţa, Romania*

Skills

Frameworks: Spring, SOAP, React, Angular, Maven, Android, React Native

Languages: Java, JavaScript/TypeScript, Kotlin, HTML/CSS, Python, C/C++, Assembly

Databases: PostgreSQL, MongoDB, Redis, Firebase, SQLite, Couchbase

Tools: Kafka, Protobuf, OAuth2, AOP, Webflux, Jakarta, Redux, Kong, Docker, AWS

CI/CD & Observability: Jenkins, GitHub Actions, Grafana, SignalFx, Splunk

Testing: JUnit, Mockito, Swagger/OpenAPI

Languages

English (Full professional proficiency), **Italian** (Limited working proficiency),
Hungarian (Limited working proficiency), **Romanian** (Native/bilingual proficiency)

Projects

E-Commerce Platform, *React, Redux, TypeScript, Spring, WebFlux, Java, PostgreSQL, MongoDB, Firebase* Thesis

- Developed a modular eCommerce platform enabling users to create and manage fully personalized online stores without technical expertise
- Designed a distributed microservices architecture, separating user accounts, products, orders, and store data across reactive PostgreSQL and MongoDB backends
- Built a dynamic React SPA with theme customization, automated sales, and real-time product analytics, integrating Firebase for secure media storage and JWT-based authentication

Gaming Community Website, *React, Vite, Tailwind CSS, Supabase, Netlify* romaniawarlords.ro

- Built and maintain a community website for Romania's largest Clash Royale clan family, including live standings, online member counts, and per-clan detail pages
- Built a scheduled background integration pulling live clan and player data from the Clash Royale API into Supabase
- Implemented localization (RO/EN) and a responsive, mobile-friendly UI across the site
